

What's New for MATLAB

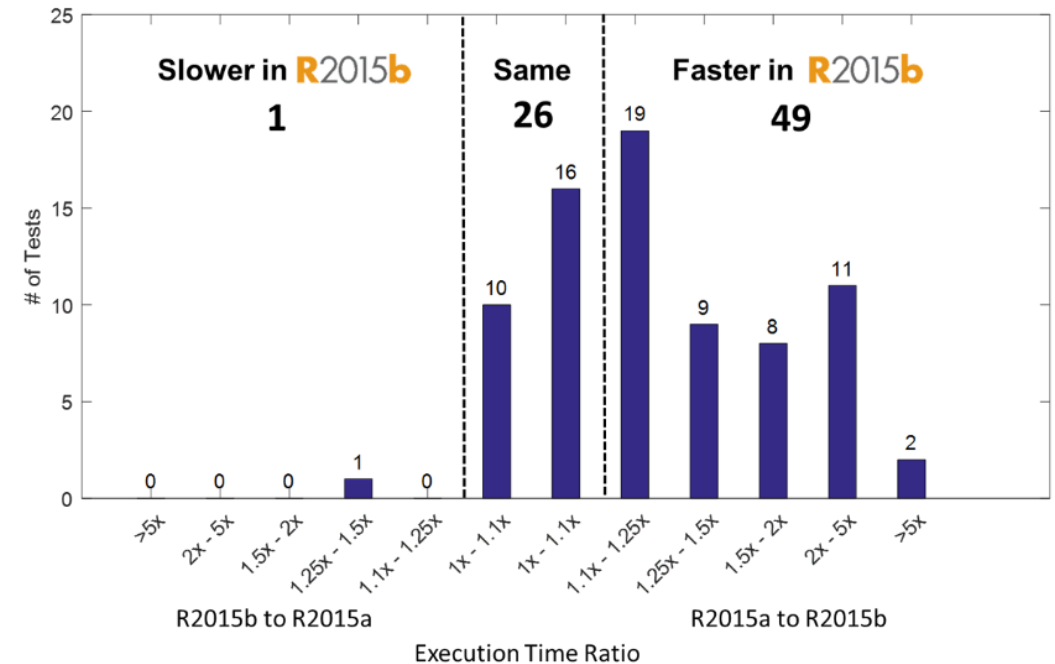

David Willingham

R2015b

MATLAB Execution Engine

- Redesigned **execution engine** runs MATLAB code faster
 - All MATLAB code is now JIT compiled
 - A platform for future improvements
- Average performance improvement of **40%** on **76 performance-sensitive user applications**
 - Function call overhead is lower
 - Many object-oriented features are faster
 - Some element-wise operations are faster
- Learn more
 - www.mathworks.com/products/matlab/matlab-execution-engine/

Other Performance Updates

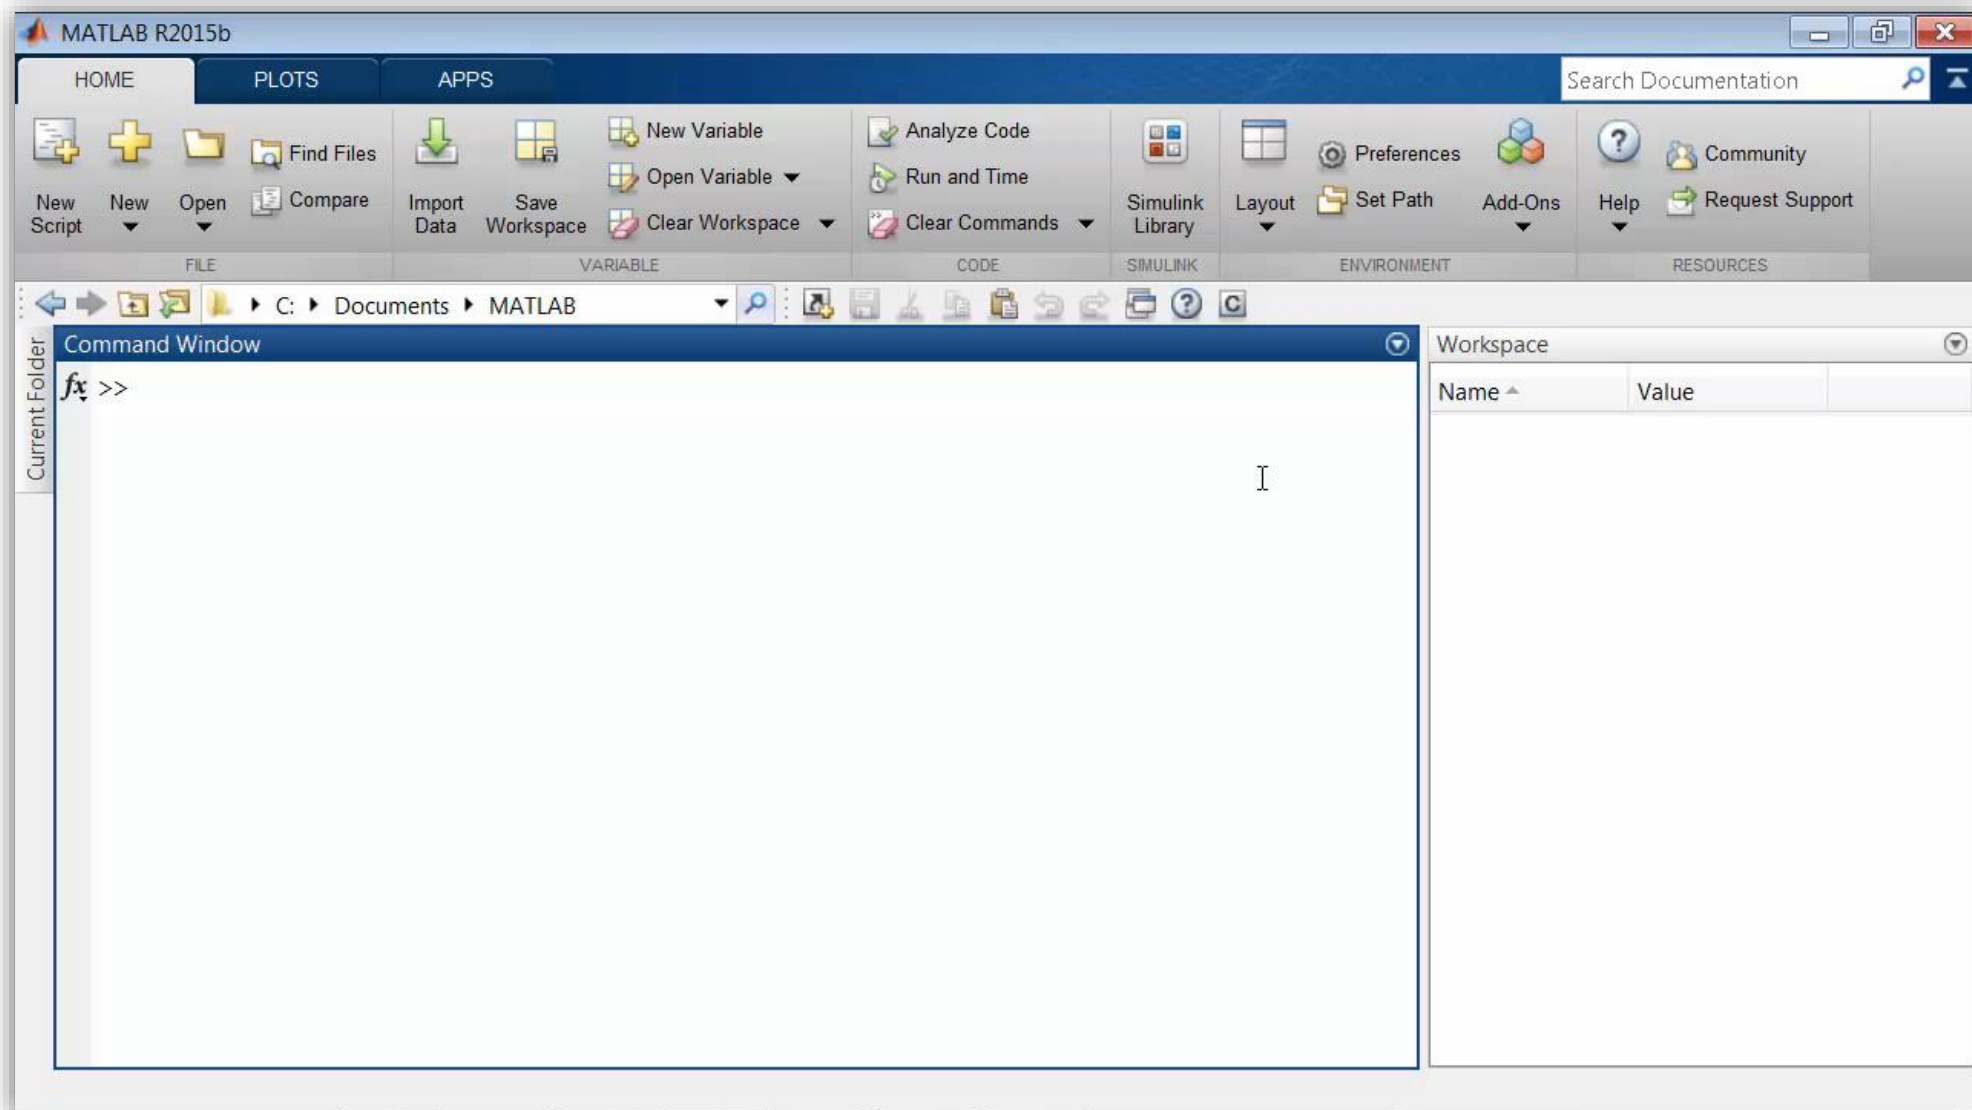

- Database Toolbox
 - Faster database read and write
- Image Processing Toolbox
 - Performance improvements for image filtering and grayscale morphology
- GPU acceleration using Parallel Computing Toolbox
 - More than 90 GPU-enabled functions in Statistics and Machine Learning Toolbox, including:
 - Probability distributions
 - Descriptive statistics
 - Hypothesis testing
 - An additional 16 MATLAB functions supported using gpuArrays
 - An additional 23 MATLAB functions supported using sparse gpuArrays

Add-On Explorer

- Add capabilities to MATLAB, including **community-authored** and **MathWorks** toolboxes, apps, functions, models, and hardware support
 - Browse and install add-ons directly from MATLAB
 - Access **community-authored** content from File Exchange

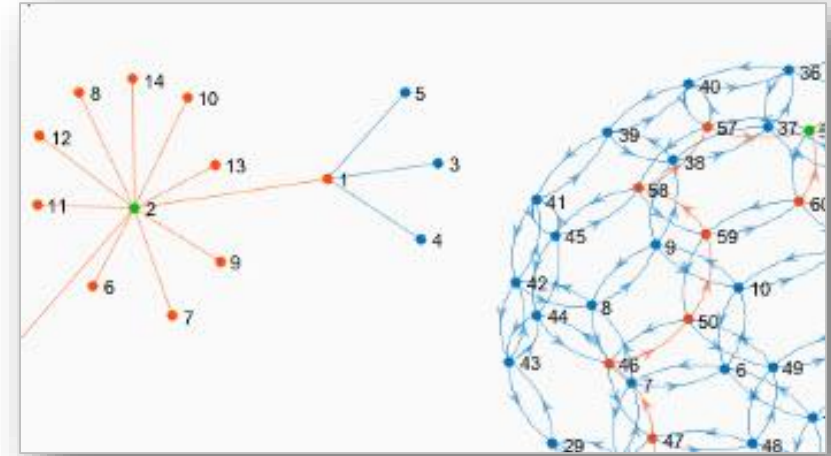

Add-On Explorer

Graphs and Network Algorithms

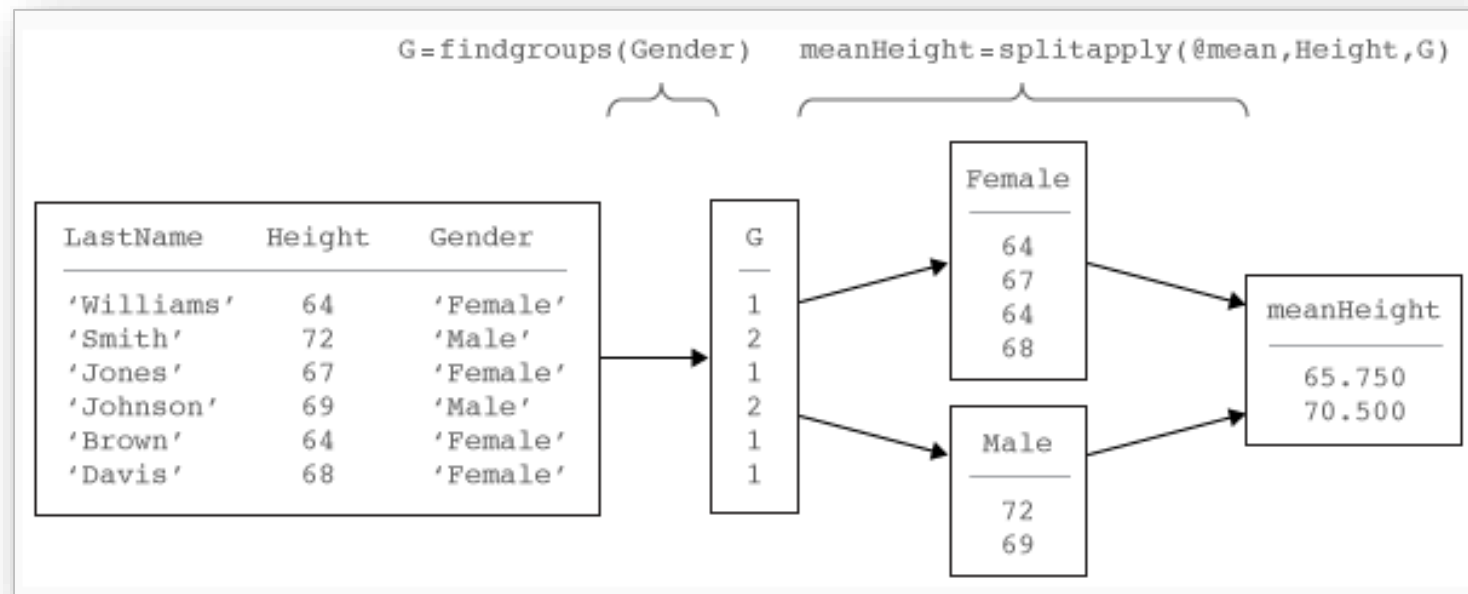

- Graphs model the connections in a network
 - Widely applicable in physical, biological, and information systems
- Two new functions for creating graphs
 - **graph** (undirected graphs)
 - **digraph** (directed graphs)
- Graph objects work just like other MATLAB objects
- Multiple graph layouts available (circular, force-directed, tiered)
- New functions available for working with graphs
 - **shortestpath**, **shortestpathtree**, **minspantree**, **distances** (and many others)

Split-Apply-Combine Workflow

Analyze Groups of Data

- Two new functions to support this workflow
 - `findgroups` – splits the data into groups
 - `splitapply` – applies a function to each group, and combines the results

Enhancements to MATLAB and Python Interoperability

- MATLAB Engine API
(for calling MATLAB from Python)
 - Call MATLAB functions and objects from Python by connecting to a running session of MATLAB

- MATLAB interface to Python
(for calling Python from MATLAB)
 - Clear Python class definitions with **clear classes** command (useful when reloading revised Python classes)

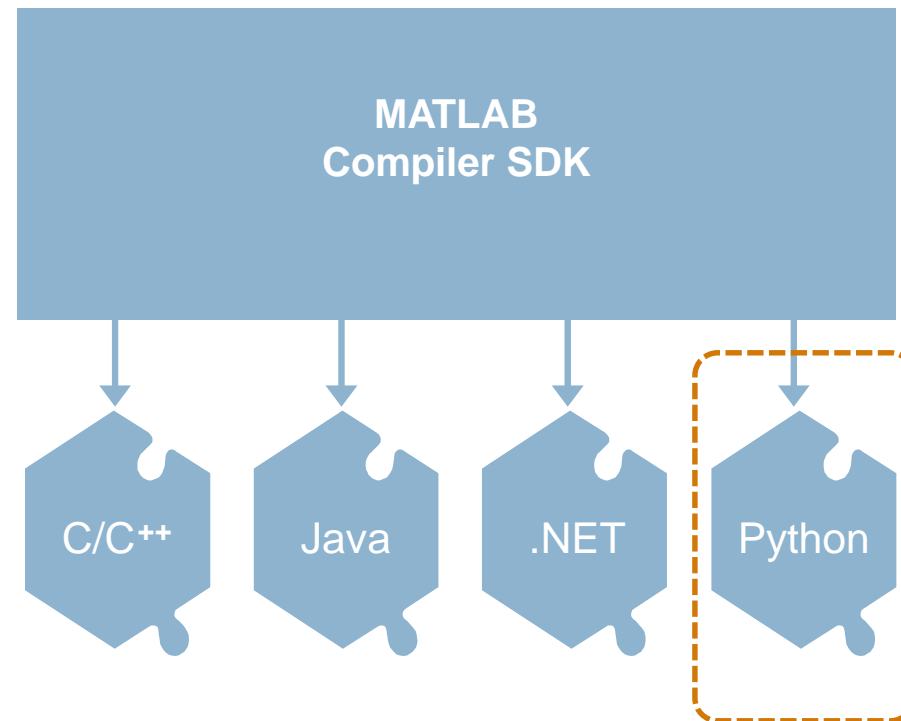

```
C:\windows\system32\cmd.exe
>>> import matlab.engine
>>> eng = matlab.engine.start_matlab()
>>> eng.sqrt(9.0)
3.0
```

```
MATLAB R2015b
HOME PLOTS APPS Search Documentation
>> s = py.string.Template( ...
    'Patient Name: $who')
>> substitute(s,pyargs('who','Smith'))
Patient Name: Smith
fx >>
```

Deploying to Python Environments

- Create deployable MATLAB components for integration with applications written in Python using MATLAB Compiler SDK

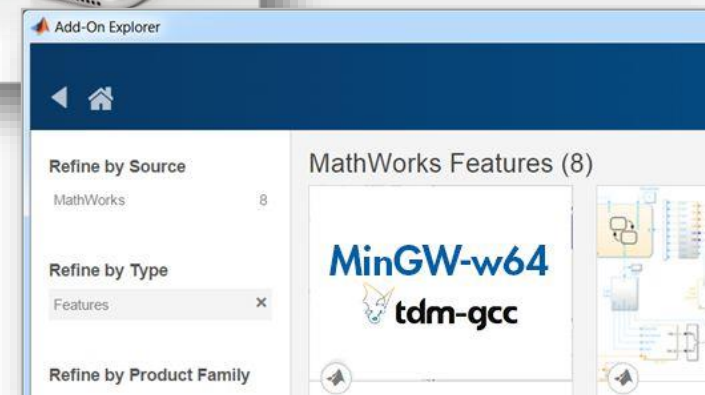

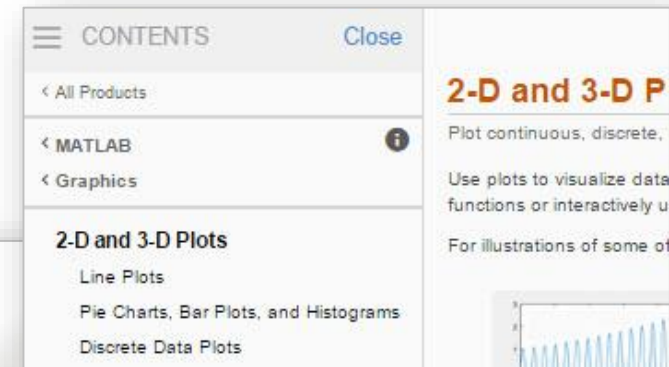

Visualization Enhancements

- Graphics enhancements for customizing plot axes
 - Setting locations to cross at the origin
 - Controlling the appearance of an individual axis in a plot
- New functions for bivariate histograms
 - Plot using `histogram2`
 - Bin using `histcounts2`

Other MATLAB Updates

- Documentation
 - Redesigned Help navigation
- Hardware support for:
 - Raspberry Pi 2
 - iOS sensors
 - BeagleBone Black
- MEX compiler support
 - Access to a free compiler (**MinGW-w64**) for 64-bit Windows (*from the Add-On Explorer*)
- imageDataStore**
 - New function for importing data from image collections

Statistics and Machine Learning Toolbox

Classification Learner – R2015a

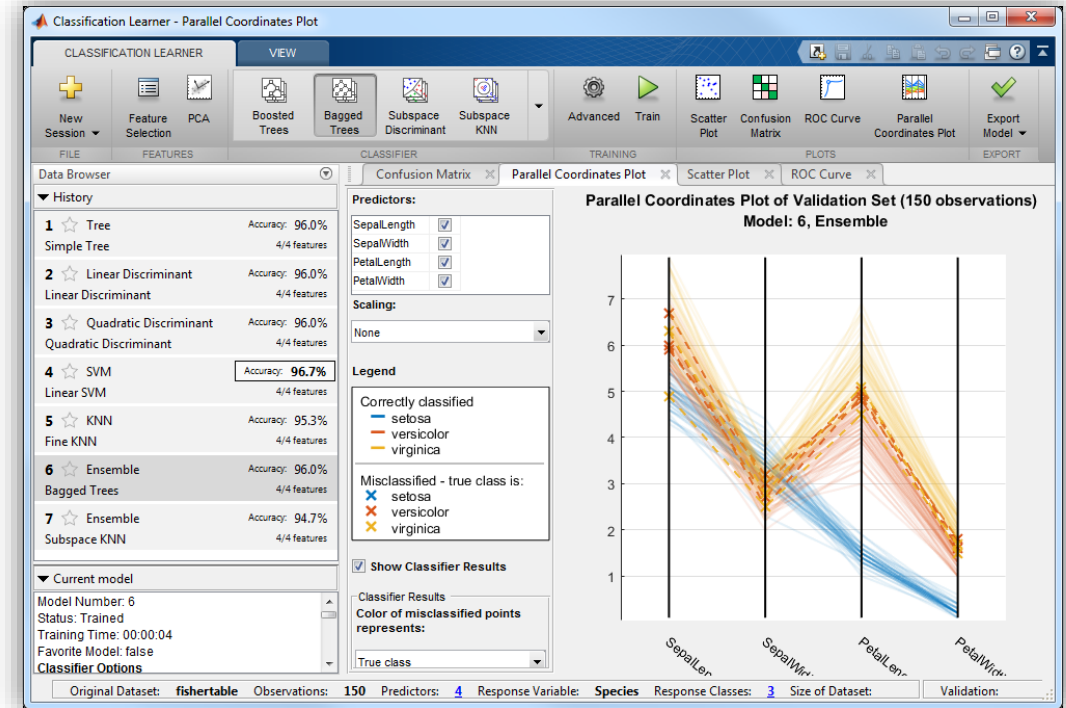

- New app to train models and classify data using supervised machine learning

New in R2015b

- Classification Learner enhancements
 - PCA, Discriminant Analysis, Categorical Variables
- Nonparametric Regression
 - Support Vector Regression, Gaussian Processes (Kriging)
- Table and categorical data support for Machine Learning
- GPU acceleration for over 65 functions
- C code generation for KMEANS clustering

Requires Parallel Computing Toolbox

Requires MATLAB Coder

Computer Vision System Toolbox

- 3-D point cloud processing, including geometric shape fitting, normal vector estimation and visualization
